## Proactive system monitoring with SystemSentry

Included in our VITM service, **SystemSentry** from S2 offers your business proactive 24/7 system monitoring, checking for any issues that, if left untreated, could cause system downtime.

Each day SystemSentry monitors your server and networks. Automated system health checks alert our engineers to any emerging problems, enabling them to deal with issues sooner, before they become serious and costly to fix.

You can choose from daily, weekly and monthly reporting to stay on top of how your system is performing, with news on any preventative measures our engineers are making in the background to keep your systems running smoothly.
